Windows Administrator

Do you want a career that serves a higher purpose? The people at SRR Solutions Inc. are committed to helping you reach your maximum potential. We hire smart, motivated people, give them world-class tools in a supportive environment, and we let them do their job. In return, our team is highly engaged, creates quality solutions and delivers outstanding customer service. Our leaders understand the critical elements of breakthrough performance: bringing out the best in people; creating a climate of trust, openness and high performance; fostering candor; and treating people fairly and with dignity. SRR Solutions Inc. provides the environment, leadership and support that enable our team members to exceed their career expectations consistently.

Job Description:

SRR Solutions Inc. has an immediate, funded opening for a solid Tier2 or mid-level Tier 3 Windows Systems Administrator. The Sys Admin must possess the knowledge and skills to take lead on the creation of Windows based servers and workstations. Candidate will work on both bare metal and virtual servers. Work will include systems design, building, and configuration to work within existing infrastructure. Systems will have to support the custom designed software and scripts. Once built and deployed, candidate will hand off routine O&M activities to a separate team.

Personnel supporting this task must meet the following requirements and perform all tasks related to the customer software development environment including but not limited to:

Position Requirements:

Required:

o   3+ years of recent experience with creation and distribution of Windows based images (server, workstation) using tools such as Microsoft Deployment Toolkit (MDT), Hashicorp Packer, or Ansible.
o   3+ years of experience with managing Microsoft Administrative tools, such as Active Directory Users and Computers, Microsoft DNS, Microsoft DHCP, etc.
o   3+ years of demonstrated ability to create and implement Microsoft Group Policies with a focus on system hardening and best-practice security design.
o   2+ years of experience with configuring appropriate logging using Sysmon, Windows Event Management.
o   2+ years of experience writing, modifying, and interpreting PowerShell scripts.
o   2+ years of experience building and deploying servers in a virtual environment, to include specifically VMware vSphere and VMware Workstation/Player
o   2+ years of experience documenting "As-Is" and "To-Be" system builds and capture architecture and work flows in systems/network drawing.
o   Ability to think critically and exhibit strong problem-solving skills

- o Must be able to accommodate a flexible work schedule that may include nights, weekends or holidays as required

Desired:

- o Knowledge of Python
- o Automation knowledge of Hashicorp's Terraform
- o Demonstrated Linux command line knowledge

Requirements:

- o U.S. Citizen
- o Acive TS/SCI with FSP

*Selected candidate will need to be approved by the Prime.
